Bayside Urologist Dr. Ricardo Ricciardi Designated a UroLift Center of Excellence at Advanced Urology Centers of New York

BAYSIDE, N.Y., April 25, 2018 /PRNewswire/ -- Advanced Urology Centers of New York today announced that Ricardo Ricciardi, M.D., a Bayside, N.Y., urologist, has been designated as a UroLift Center of Excellence. The designation recognizes Dr. Ricciardi’s high level of training and experience with the UroLift System and demonstrates a commitment to exemplary care for men suffering from symptoms associated with benign prostatic hyperplasia (BPH).

“The UroLift System is a truly minimally-invasive therapy for BPH,” said Dr. Ricciardi. “It can be performed in-office under local anesthesia without cutting, cutting or removal of prostate tissue. Patients are able to go back to their normal routines quickly and can discontinue the use of medications. It is rewarding to be able to offer my patients a breakthrough treatment option that offers real long-term results.”

Nearly 40 million men in the United States are affected by BPH. Not to be confused with prostate cancer, BPH occurs when the prostate gland that surrounds the male urethra becomes enlarged with advancing age and begins to obstruct the urinary system. Symptoms of BPH often include interrupted sleep and urinary problems, and can cause loss of productivity, depression and decreased quality of life.

Five-year data from a randomized study shows the UroLift System offers not only rapid improvement, but also durable relief for patients with BPH. After five years, patients treated with the UroLift System continue to experience symptom relief with minimal side effects, with few patients requiring an additional procedure for relief. A second randomized clinical trial that called BPH demonstrated that the minimally invasive UroLift System is comparable to the reference standard surgery, transurethral resection of the prostate (TURP), with regard to efficacy, and is superior to TURP at preserving sexual function and offering a more rapid recovery.

Medication is often the first-line therapy for enlarged prostate, but relief can be inadequate and temporary. Side effects of medication treatment can include sexual dysfunction, dizziness and headaches, prompting many patients to quit using the drugs. For these patients, the classic alternative is surgery that cuts, heats or removes prostate tissue to open the blocked urethra. While current surgical options can be very effective in relieving symptoms, they can also leave patients with permanent side effects such as urinary incontinence, erectile dysfunction and retrograde ejaculation.

About Advanced Centers of New York
Advanced Urology Centers of New York (AUCNY), a division of Integrated Medical Professionals, PLLC, is comprised of community physicians committed to providing the highest level of medical care to patients. AUCNY is comprised of 24 centers located throughout the metropolitan area of Nassau, Suffolk, Queens, Manhattan, The Bronx, Westchester and Rockland counties. AUCNY is the largest urology group practice in the United States, and leading regional provider of urology services. To learn more about Advanced Urology Centers of New York: call 516-931-0041 or visit http://www.aucny.com.

About the UroLift System
NeoTract’s FDA-cleared UroLift System is a novel, minimally invasive technology for treating lower urinary tract symptoms due to benign prostatic hyperplasia (BPH). The UroLift permanent implants, delivered during a minimally invasive transurethral outpatient procedure, relieve prostate obstruction and open the urethra directly without cutting, heating, or removing prostate tissue. Clinical data from a premarket 205-patient randomized controlled study showed that patients with enlarged prostate receiving UroLift implants reported rapid and durable symptomatic and urinary flow rate improvement without compromising sexual function. Patients also experienced a significant improvement in quality of life. Most common adverse events reported include hematuria, dysuria, microlithiation, urgency, pelvic pain, and urge incontinence. Most symptoms were mild to moderate in severity and resolved within two to four weeks following the procedure. The UroLift System is available in the U.S., Europe, Australia, Canada, Mexico and South Korea. Learn more at http://www.UroLift.com.
